                                                                                                                                                                  Five synthetic sequences (AAT29063-67) are used as probes to detect the presence of Candida albicans and Candida stellatoides in biological fluids e.g. sputum, bronchial washings, blood, milk and lymph fluid or in tissue samples e.g. skin and soft tissues. The method of detection may also comprise using two of the probe sequences (AAT29065, AAT29066) as amplification primers and then contacting one of the probe sequences with the amplified product and

                                                             the presence of Candida albicans and Candida stellatoides in biological fluids e.g. sputum, bronchial washings, blood, milk and lymph fluid or in tissue samples e.g. skin and soft tissues. The method of detection may also comprise using two of the probe sequences (AAT29065, AAT29066) as amplification primers and then detecting one of the probe sequences with the amplified product and detecting hybridisation.
                                                                                                                                                                                                                                                                                                         Gaps

The method of detection may also comprise using two of the probe sequences (AAT29065, AAT29066) as amplification primers and then contacting one of the probe sequences (the probe sequences with the amplified product and detecting hybridisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Five synthetic sequences (AAT29063-67) are used as probes to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                C. albicans and C. stellatoides specific probes and primers - for
specific detection of Candida infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the presence of Candida albicans and Candida stellatoides in biological fluids e.g. sputum, bronchial washings, blood, milk and lymph fluid or in tissue samples e.g. skin and soft tissues. The method of detection may also comprise using two of the probe sequences (AAT29065, AAT29066) as amplification primers and then detecting one of the probe sequences can be sequenced to the probe sequences (and the probe sequences can be sequenced to the probe sequences to the probe sequences with the amplified product and detecting hybridisation.
                                                                                                                                                                                                                                                                                                                    C. albicans and C. stellatoides specific probes and primers - for specific detection of Candida infection % \left( 1\right) =\left\{ 1\right\} =

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Five synthetic sequences (AAT29063-67) are used as probes to detect the presence of Candida albicans and Candida stellatoides in biological fluids e.g. sputum, bronchial washings, blood, milk and lymph fluid or in tissue samples e.g. skin and soft tissues. The method of detection may also comprise using two of the probe sequences (AAT29065, AAT29066) as amplification primers and then detecting one of the probe sequences with the amplified product and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

1948 CCAAACCCAACTGTCACCACTACTGAATACTGGTCTCAATCATATGCAACCACTACTACC 2007
       the presence of Candida abbicans and Candida stellatoides in biological fluids e.g. sputum, bronchial washings, blood, milk and lymph fluid or in tissue samples e.g. skin and soft tissues. The method of detection may also comprise using two of the probe sequences (AAT20065, AAT29066) as amplification primers and then contacting one of the probe sequences with the amplified product and detecting hybridisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Five synthetic sequences (AAT29063-67) are used as probes to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                  Five synthetic sequences (AAT29063-67) are used as probes to detect the presence of Candida albicans and Candida stellatoides in biological fluids e.g. sputum, bronchial washings, blood, milk and lymph fluid or in tissue samples e.g. skin and soft tissues. The method of detection may also comprise using two of the probe sequences (AAT29065, AAT29066) as amplification primers and then detecting one of the probe sequences with the amplified product and detecting hybridisation.
                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of DNA encoding human dentin sialophosphoprotein (DSPP, see AAB19772), a member of the small integrin binding ligand, N-linked glycoproteins (SIBLINGS) family. The invention provides methods and compositions for exploiting the discovery that members of the SIBLINGS family bind to complement compositions for exploiting the discovery that members of the SIBLINGS family bind to complement companies of the SIBLINGS family bind to complement mediated immune response involves providing a reservoir or other mediated immune response involves providing a reservoir or other cupply in the subject's body so that a SIBLINGS protein can be dispersed to interfere with complement mediated lysis and inflammation. This protects cells that are grafted onto foreign inflammation. This protects cells that are grafted onto foreign tissue or bone marrow cells introduced into a foreign host. The SIBLINGS protein can be BSP, OPN, DMPI or DSPP. A method of detecting a SIBLINGS protein in a sample from a subject suspected of having abnormal bone turnover, especially osteoporosis, is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7290 ACTGCTGTCACTGCTATTGCTGTCACTGCTGTCACTGCTATCGCTGCTGTCACTGCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        defitingenesis imperfecta type II and/or its accompanying deafness comprising determining the dentin sialophosphoprotein (DSPP) gene, its transcript and/or protein of an individual for comparison of their sequences with the normal sequences and judging the individual to have higher risk of suffering from the disease then the normal population.

Also described are: (1) treating dentinogenesis imperfect type III and/or its accompanying deafness by administering a safe and effective containing safe doses of DSPP and/or DSP protein to patients; (2) drug compositions containing primers for specific amplification of DSPP gene or its transcript, or containing probes for binding to the mutation site.

The DSPP gene and protein sequences have auditory activity. The method (MI), dentin sialophosphoprotein (DSPP) gene and DSP protein are useful for diagnosing and treating imperfecta type II and/or its accompanying deafness. The DSPP gene is located to chromosome 4421. The present companying deafness are been and DSPP gene from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GCTGTCACTGCTATCACTGCTGCTGCTATCACTGCTGTCACTGCTGTCACTGCTATC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to the GP900 glycoprotein of the protozoan Cryptosporidium parvum, DNA encoding it, GP900 fragments, and fusion proteins comprising GP900 fragments. The invention also relates to the administration of GP900 or fragments thereof to a host to elicit anti-GP900 antibody production, and to a method of cryptosporidiosis treatment of properties comprising administration of anti-GP900 antibodies to an individual. Cryptosporidium parvum GP900 and GP900 intibodies are able to competitively inhibit sporozoite or merozoite attachment or invasion, and are also useful for the generation of anti-GP900 antibodies. The attachment inhibit the binding of GP900 ligands to GP900. GP900 antibodies attachment inhibit the binding of GP900 ligands to GP900. GP900 of antibodies at so inhibit sporozoite or merozoite attachment/invasion and additionally inhibit the binding of GP900 ligands to GP900. GP900 cc additionally inhibit the binding of GP900 ligands to GP900. GP900 cc antibodies and antibodies may therefore be used to treat or provent cryptosporidiosis. Infection with Cryptosporidium is a common cc ause of diarrhoea in humans and causes life-threatening diarrhoea in contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of disease in animals, resulting in financial losses in contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of disease in animals, resulting in financial losses in cused for the diagnosis of Cryptosporidium parvum infections, and for the detection of the parasite in the environment. The present sequence represents the open erading frame (ORF) encoding the GP900 protein of the

This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
Saccharomyces kluyverii, Kluyveromyces thermotolerans, Kluyveromyces
lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila,
Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
5 kb were prepared and both extremities were sequenced. See
keywords for description of this sequence and for the sequence of
the other extremity of this insert.

This GSS is part of a random genomic sequencing program of thirteen
yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
Saccharomyces Kluyveru, Kluyveromyces thermotolerans, Kluyveromyces
lactis var. lactis, Kluyveromyces thermotolerans, Kluyveromyces
angusta. Debaryomyces hansenii var. hansenii, Pitchia sorbitophila,
Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
5 kb were prepared and both extremities were sequenced. See
keywords for description of this sequence and for the sequence of
the other extremity of this insert.

   This GSS is part of a random genomic sequencing program of thirteen
   Yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
   exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
   Saccharomyces Kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
   lactis var. lactis, Kluyveromyces thermotolerans, Rluyveromyces
   lactis var. lactis, Rluyveromyces marxianus var. marxianus, Pichia
   angusta. Debaryomyces hansenii, var. hansenii, Pichia sorbitophila,
   Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
   5 kb were prepared and both extremities were sequenced. See
   keywords for description of this sequence and for the sequence of
   the other extremity of this insert.
   Location/Qualifiers

II. 1047
CNSO7D6L 1047 bp DNA linear GSS 08-JUL-2001 T7 end of clone BD0AA009H06 of library BD0AA from strain CBS 94 of Candida tropicalis, genomic survey sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2 (bases 1 to 1047)
